

ANKER OmniOption Cash Cassette OCC

Flexible. Secure. Ready for the international market

The OmniOption Cash Cassette offers a robust ABS casing coupled with an adjustable insert. With the benefit of movable side panels, the retailer or hospitality provider may create a variety of coin compartment sizes, making the OmniOption Cash Cassette suitable for any currency. Standard note compartments may be located on either the left or right side dependent on 'check-out' policy, while large denomination notes, receipts or coupons may be stored in a separate space below the coin compartments for additional security.

The OmniOption Cash Cassette fulfills all the requirements of a modern cash cassette and is designed for flexibility, system compatibility and security

Lockable cash cassette offers high security

The OmniOption Cash Cassette is opened electronically by the POS terminal. The cassette may also be opened using the high-quality lock and key, which is available with 50 different key combinations. An optional plug lock is available for additional security. The Cassette open/closed status is communicated to the POS system via a switch

Higher security and ease of use at the POS

Internally flexible: Coins, notes and receipts

The OmniOption Cash Cassette has adjustable side panels, which allow coin compartments to be 'sized' for any currency and provides total flexibility in arranging the insert.

High value notes and receipts may be stored securely below the coin compartments, which may be positioned on the left or right as required. This feature accommodates left-handed personnel and provides better security options in 'back to back' checkout lanes.

Key benefits of the OmniOption Cash Cassette

- Movable side panels for adjustable insert layout
- Secure storage below the coin insert
- Optional 'handling' for note and coin compartments (left or right)
- Maximum lid opening – almost 90°
- Base plate designed for secure removal
- Easy-to-clean 'non rusting' surface
- High-quality lock with up to 50 key combinations

Ease of use for the checkout operator

The cassette lid opens to almost 90° offering maximum access and ease of use when taking money or giving change. The lid operation is controlled by metal guides on each side of the housing, which have an integral spring to accelerate and slow opening. The guides also act as the 'opening stop' so there is minimal wear or pressure on the cassette hinge assembly, greatly increasing the operational life of the cassette and ensuring that the opening angle and speed remain constant throughout its life cycle.

Robust plastic Cassette

The OmniOption Cash Cassette is manufactured using injection moulded ABS plastic and designed for maximum longevity. In addition, the plastic is environmentally friendly and may be recycled. The surface of the cassette repels dirt, is highly scratch resistant, hygienic and easy to clean.

Firmly mounted base plate

The OmniOption Cash Cassette system is comprised of a base and the OmniOption Cash Cassette. The base is firmly mounted to the checkout counter. The OmniOption Cash Cassette is secured on the base and locked in place. The base contains the electronic release unit for normal 'authorised opening'.

To remove the cassette, the operator opens it and pushes the release button, which unlocks the cassette from the base.

Compatible with all commonly used POS systems

The OmniOption Cash Cassette operates with all major POS systems. If the terminal is changed only the base or connecting cable needs to be replaced.

Optional accessories

- Coin sorting tray (weighable)
- Additional security plug lock (2000 combinations)
- Metal Cover for note compartment (Anti-Snatch Plate) to prevent unauthorised access at checkout
- External note holder

Technical specifications

Components		Description
Measurements		460 mm x 100 mm x 160 mm (WxHxD)
Weight	Cassette	2,0 kg
	Base	1,4 kg
Colours		Light Grey: RAL 9002
		Dark Grey: RAL 7021
